| Alternative Names     | TAT; Tyrosine aminotransferase; TAT; L-tyrosine:2-oxoglutarate aminotransferase                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Background            | tyrosine aminotransferase(TAT) Homo sapiens This nuclear gene encodes a mitochondrial protein tyrosine aminotransferase which is present in the liver and catalyzes the conversion of L-tyrosine into p-hydroxyphenylpyruvate. Mutations in this gene cause tyrosinemia (type II, Richner-Hanhart syndrome), a disorder accompanied by major skin and corneal lesions, with possible mental retardation. A regulator gene for tyrosine aminotransferase is X-linked. [provided by RefSeq, Jul 2008], |
