Description	CDK2/CyclinO is a member of the cyclin dependent protein kinase family complexed to CyclinO. CyclinO was used as a specific protein isoform name for the UNG gene which is localized exclusively in the nucleus. In addition, CyclinO was reported to shows significant uracil-DNA glycosylase activity . CDK2/CyclinO protein levels increase during G1 phase and the protein is turned over during the course of cell cycle .
Functions	The specific activity of CDK2/Cyclin O was determined to be 46 nmol /min/mg as per activity assay protocol.
