Description	CK1?1 or casein kinase 1, gamma 1 is belonging to the most abundant serine/threonine kinase in eukaryotic cell extracts which is mainly involved in growth and morphogenesis of eukaryotic cells. Casein kinase 1, gamma 1 possesses a C-terminal most terminal sequence motif (MTM), which it shares with CSNK1G2 and CSNK1G3 which is associated with heterologous carboxy-terminal sequences . Casein kinase 1-gamma couples Wnt receptor activation to the cytoplasmic signal transduction apparatus .
Functions	The specific activity of CK1?1was determined to be 82 nmol /min/mg as per activity assay protocol.
