Description	DYRK2 (also known as dual-specificity tyrosine-(Y)-phosphorylation regulated kinase 2) belongs to a family of protein kinases whose members are presumed to be involved in cellular growth and/or development and is defined by structural similarity of their kinase domains and their capability to autophosphorylate on tyrosine residues. DYRK2 expressed in E. coli demonstrated tyrosine autophosphorylation and catalyzed phosphorylation of histones H3 and H2B in vitro . DYRK2 also regulates p53 to induce apoptosis in response to DNA damage .
Functions	The specific activity of DYRK2 was determined to be 1,250 nmol /min/mg as per activity assay protocol.
