Description	?Interleukin-1 receptor-associated kinase 2 (IRAK2) is important downstream signaling components of Toll-like receptors (TLRs) . IRAKs were first described as signal transducers for IL-1 and later have been implicated in signal transduction of other members of the Toll/IL-1 receptor family. The interleukin-1 receptor (IL-1R) signaling pathway leads to NF?B activation in mammals. To date, four mammalian IRAKs have been identified (IRAK-1, IRAK-2, IRAK-4, and IRAK-M) . It is believed that IRAK-2 could be an additional therapeutic target for inhibiting IL-1-induced inflammation.
Functions	The specific activity of IRAK2 was determined to be 6 nmol /min/mg as per activity assay protocol.
